POSSIBLE COMPUTANK REPLACEMENTS

We didnt sell enough CompuTank displays (about 1000 in 10 years) to make them worth the effort to build. So we stopped selling them several years ago.

Sometimes a CompuTank display is repairable. We can check them for you (Centroid Products, 2104 Hibiscus Dr, Edgewater FL 32141). And we can replace a front panel for cosmetic purposes or if one of the buttons isnt working. But "dead" CompuTank displays are not economically repairable, particularly if there was a lightning strike. Email help@centroidproducts.com in any case and I'll have you check a few things.

Folks ask what multi-tank system they can use as a replacement. I did a quick web search for "monitor for fuel and water level on yachts". Here are two possibilities; you'd likely find others. Ideally the multi-tank display would accept voltage inputs because your Centroid senders for a CompuTank system have E0/F4 volt inputs. Email me a link for a display if you're uncertain whether it's a convenient choice.

BLUE SEA SYSTEMS "M2" TANK MONITOR (about \$300) or VSM-422 (\$450): 4 tanks
https://www.blueseasystems.com/products/1839/M2_OLED_Tank_Monitor

The Blue Sea has two menu selections for ultrasonic senders. Blue Sea tech support tells me this selection looks for an E0.25/F1.5 volt signal from the senders. The CompuTank E0/F4 volt senders could be readjusted to this range.

WEMA UP7-A or B (about \$100): 7 tanks
<http://www.wemausa.com/gauges/multi-tank.shtml>

These are designed for E240/F33 ohm resistance outputs, not voltage outputs. So you'd need new senders. We can make senders with resistance outputs.

Model: UP7-A
Part #: 160600U
Signal: 240-33 Ω
Working V: 12V/24V
Size: 4" Diameter

Order UP7-A

Model: UP7-B
Part #: *Need #*
Signal: 240-33 Ω
Working V: 12V/24V
Size: 4" H x 6-1/8" W

Order UP7-B

OR...if you dont mind buying used, Scott Weiland at Allied Marine (scott.weiland@alliedmarine.com) has a used CompuTank display to sell. It wouldnt have a warranty since all CompuTank displays are well past 2 years old.
